

EV Isolation Tools

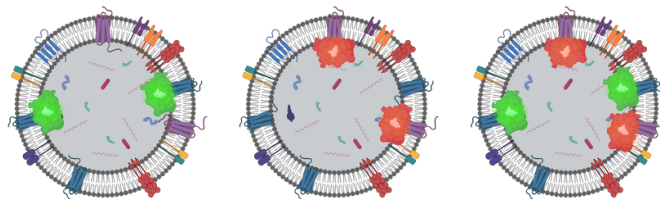

Tangential flow filtration (TFF) cartridges, size exclusion chromatography (SEC) columns, immunoaffinity solutions and precipitation reagents for EV isolation and purification from mammalian and other EV sources.

Reusable, sterile TFF cartridges available for EV isolation, purification, depletion, or buffer exchange from biofluids, cell conditioned media, plants, bacteria, and fungi.
Automation system now available!

EV Standards

Lyophilized EVs from various sources for assay and/or instrument calibration.
Engineered EVs for stable fluorescence emission or high marker expression.

Engineered EVs expressing fluorescent proteins in fusion with tetraspanin markers that can be utilized for assay/instrument calibration or in-vitro tracking

EV Characterization Kits

EV quantification kits, antibodies for EV research, nucleic acid extraction kits.
